

Mayank Goyal

Mobile Lead Engineer | Android Native

Bengaluru,  +91-8800773060  4gmayank  4gmayank  @:mayankgoyal.mait@gmail.com

SUMMARY

Mobile Lead Engineer with 8+ years of experience building and modernizing production applications using Native Android, Kotlin, Jetpack Compose and Flutter. Experienced in owning applications end-to-end — from architecture and feature development to performance optimization, testing, CI/CD and Play Store releases.

Delivered 20+ production applications across FinTech, workforce management, traffic monitoring, healthcare and consumer platforms, including applications with 100M+ and 50M+ downloads. Experienced in technical leadership, mentoring, client collaboration and designing scalable mobile architectures

CORE SKILLS

- Platform** : Native Android (Kotlin, Java, Compose), — Android,
Architecture : Clean Architecture, MVVM, MVI, Modular Architecture, SOLID, Design Patterns, Reusable UI Components, Responsive UI, Deep Linking Platform Channels, Deep Linking
- Android** : Compose, Coroutines, Flow, ViewModel, Room, WorkManager, Navigation, CameraX, NDK/JNI
Backend APIs : REST, GraphQL, Retrofit, WebSockets, SignalR
Cloud Services: Firebase (Crashlytics, Analytics, Messaging), AWS (S3, Lambda, Terraform), GCP (Basic)
Connectivity : Bluetooth, GATT, BLE, WebSockets, SignalR
Testing : JUnit, Mockito, Unit Testing, Crashlytics, SonarQube
CI/CD : GitHub Actions, Jenkins, Fastlane, Codemagic
Integrations : Razorpay, UPI, Maps, Push Notifications, Video Streaming
Leadership : Technical Leadership, Architecture, Code Reviews, Mentoring, Client Communication

WORK EXPERIENCE

Everforth Quinnox, Bengaluru  March 2026 - July 2026
Consultant for WM-Driver Application
Project: WM Driver App & OBU Application (Enterprise Waste Management)
■ Modernized an enterprise Android application using **UDF, MVVM and Clean Architecture**.
■ Migrated the persistence layer from **ORMLite to Room** and modernized UI using **Jetpack Compose and Navigation**.
■ Implemented feature-flagged releases to enable safer, phased production rollouts.
■ Improved CI/CD automation using **Jenkins and GitHub Actions**.
■ Improved application maintainability, performance and code quality through architectural modernization.
■ Leveraged AI-assisted development tools including **GitHub Copilot and Claude** for refactoring, documentation, unit-test generation and rapid prototyping.
Engineering Stack: AI-Assisted Development with Claude, GitHub Copilot, Kotlin, Compose

Etimad Holding, Abu Dhabi, UAE  Aug 2024 - Sep 2025
Project: Falcon Eye - Traffic monitoring and management platform, [media_gal](#) package
■ Led a team to design secure administration and maintenance scheduler modules, ensuring controlled access levels and timely upkeep of all radar and camera devices.
■ Architected and guided the implementation of an enum-driven UI composition pattern, enabling the team to dynamically control in-page components, column layouts, and contextual actions based on user interactions.
■ Oversaw the development of a real-time border surveillance system integrating radar detections, live RTSP video feeds, and interactive mapping for enhanced situational awareness.

- Directed native integrations using Platform Channels, bridging native modules to incorporate Google Maps SDK features, native alert services, custom video playback controllers, and background traffic data listeners for a real-time traffic monitoring application.
- Implemented **RTL** and **localization** support for the application, ensuring proper right-to-left layouts, text alignment, component mirroring, and Arabic-language usability across Flutter screens.
- Built modules for Agentic AI-driven event decision-making, location-based surveillance, and rapid action planning using nearby units and resources via middleware —SignalR, WebSocket.

Stack: Flutter, iOS, Android, Javascript, dart, XCode

Varite India, Gurgaon | Sr. Software Engineer

📅 May 2023 - July 2024

Project: **Adobe** Photoshop Express Photo Editor | [Play Store](#) (100M Downloads)

- Handled concurrency in Jetpack Compose using ViewModel-based state management and Kotlin Flow, enhancing application performance and UI responsiveness.
- Implemented low-latency PCX image editing features using Android NDK/JNI (C/C++), integrating native processing with Java/Kotlin components and coordinating in-process execution with Android IPC (Binder) where required for stable, high-performance asset workflows.
- Improved app performance through profiling, memory optimization, and reduced ANRs via better background execution patterns.
- Improved reliability through Crashlytics monitoring, strict Sonar rules, & code quality improvements.

Stack: Kotlin, Compose, JNI, Android, C++, Ndk

Ailotte Technologies, Bengaluru | Flutter Developer

📅 May 2021 - May 2023

Projects: Fintech-[BankSathi](#) (1M Downloads), Unicorn StartUp-[Apna.co](#) (50M Downloads),

JobWala, LinkOMed Platform (Social Networking Super App), FinSys Wallet, LendPesa, ProtoVerify, ProtoStaff, Khoji, SupDup, Travelaya

- Led delivery for JobWala, BankSathi, and LinkOMed, managing agile sprints via Jira and improving code quality across teams.
- PlayStore release Ownership, reduced release delays by 30% through automated rollout process
- Collaborated with unicorn startups to deliver scalable, high-performance mobile applications, achieving 99.8% crash-free users and 20% faster onboarding flows, A/B Testing, Payment Integration, resulting in improved user engagement and feature adoption.
- LinkOMed: Drove architecture and execution of medical super app platform, including onboarding, CMS/LMS, secure data workflows, AI-assisted content and engagement features, and real-time synchronization, while meeting strict **HIPAA and** GDPR compliance requirements.
- Referral module optimization, achieved 40% scalability improvement for high-load modules for Apna and BankSathi
- KYC flow Development: Built secure verification flows, **reducing fraud risk** by 20%, for Protostaff
- Advanced integrations: Maps, Video Streaming, Deep Links, Payment Gateway, Push Notifications.
- BankSathi App: Owned end-to-end modernization of the **fintech** app, including Null Safety adoption, and improved codebase stability and long-term maintainability, resulting in a 25% reduction in potential runtime issues and ensuring smoother updates.

ANR Software, Noida | Associate Programmer

📅 June 2018 - April 2021

Projects: [ZipSchedule](#), Hubworks and In-house Apps – AltaLogger, ANRCafe, ZipClockTimeClock

- Owned and maintained the shared Foundation and Hubworks/Altametrics libraries powering multiple applications, ensuring app robustness and delivering core Workforce Management modules including predictive scheduling, time and attendance, and labor cost optimization.
- Integrated CameraX, Camera2; Carousel with Adapter design pattern, and scope storage, addressing platform limitations and enhancing performance.
- Implemented PDFCreator & QR Scanning for generating custom PDFs report exports within apps.
- Integrated Bluetooth Low Energy (BLE) temperature probes with the Zip HACCP mobile application to capture and record real-time food temperature readings.
- Integrated BLE-based temperature sensors with the Android application, handling device discovery, connection, data reception, and synchronization of sensor readings.

— PROJECTS

- [CommsHub Mvp](#): feature Real Time Streaming and RTSP Server
- [Thinking Point App](#): AI-Powered Idea and Thinking Assistant
- [Developer Portfolio](#) — Projects, Skills & Experience

— EDUCATION

- B.Tech, Information Technology — Guru Gobind Singh Indraprastha University (GGSIPU), 2013 – 2017
- **GATE 2018 (Computer Science) — AIR 6777**
- Greenfields Public School, Delhi, 2013 : XII - 69%, X- 77.9%

— ADDITIONAL

Community Work: Volunteer, Smile India Event (2024) and Scrap Event (2022).

Hobbies: Reading newspapers, Solving Puzzles, Badminton
